# Quality Policy

'moving ideas' is our promise to the market as well as to ourselves and what shall be reflected also in the quality and reliability of our products.

As a specialist of customer-specific, modern, electrical drives we confront the international competition and convince our customers with quality.

Our R&D departments realize the legal and customer-specific requirements accurately and inspire our customers competently with creative and innovative solutions.

By Quality Management we are defining and communicating procedures and tools with the intention to avoid mistakes systematically in all our areas.

The optimization of business processes and the striving for continuous improvement is supported by specific process improvements, Kaizen and management projects.

We intend to create a work environment which is motivating all employees to take over responsibility for quality.
